

expandability

NetAXS-123. The web-based access control system that expands easily.

Start protecting 1, 2 or 3 doors, but add more doors as your customers' needs grow—without breaking the budget. Because NetAXS-123 add-on boards plug directly into the existing control panel, it's simple to install additional doors. Which means no extra wires and no extra cables. Whether you need to add one door or more, the modular design makes it virtually effortless and affordable. And because it's web-based you can operate and maintain it from any location. And that means no hassle. Who wouldn't like that kind of access control?

Honeywell

Simplicity. Scalability. Flexibility.
